Our software is the most straightforward and best way for associations to unite with free specialists from around the world. Programming designs and creators, countless organization experts use application consistently to find their next outsourced projects.

Keywords: Specialists, Outsourced, Autonomous Organizations, Endeavors, Profile, Expert.

I. INTRODUCTION

A **specialist** or **specialist worker** is the term which is mostly used to the person that is self-employed and who is not bound to any employer or a company or an organization in long term. They will be represented by particular companies or by any agencies who sell specialist labor to the clients; other specialist workers utilize associations who are professional or different websites in order to get jobs or work independently. "Independent contractor" is a word which is used in English which designates employment and tax class of these types of workers, the word freelance is very commonly used in creative and culture industry. Specialist marketplaces (outsourcing or crowd sourcing marketplaces) are the website which matches sellers and buyers of services given through the internet. Seller creates his profile in which it includes examples of their work, a brief description of the services that they offer and sometimes the description of their rates. On the other hand buyers have to register and also complete their profile; which can post various projects describing their particular requirements. Then they will bid for those projects on an hourly basis or on a fixed price. In the business field, **outsource** refers to contracting out from one business process to another. The terminology "outsourcing" dates back to at least 1981.It involves shifting of assets and employees from one firm to any other firm, but not necessarily every time. It means practicing of shifting the public service control to the profit corporations. **Crowdsourcing** is the process of obtaining needed idea, service or contents through soliciting contributions from an internet group, and especially from big group of people, instead of from suppliers or employees.

About Tangent ProBiz

Tangent ProBiz is a company that assists for millions of metrics across thousands of apps. It helps those who want to build their own software and helps in understanding information that the data is telling them.

Our Solutions and Technical benefits:

- Excellent delivery of software
- Very few complex problems to solve

- Quick solutions to problems

Our Solutions and Business benefits:

- Quick features delivery
- Operation environments are very stable
- Lot of time available for adding values

II. SYSTEM ANALYSIS

A. Existing System

Existing system provides only the outsourced projects but biding and working for the project is very complex. Even multiple people can't collaborate and client interaction is also very tough. Automated tracking is also not possible. Even multiple project managing is not possible.

- Lack of workspace
- Lack of tracking
- Lack of resource
- Lack of collaboration
- Security factor concerns
- Legality factors
- Communicative factors
- Work structuring can't be organized

B. Proposed system

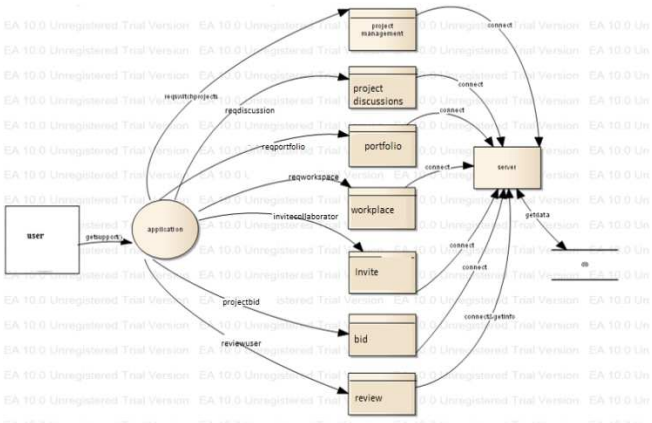
Our platform helps to provide a centralized workspace for the freelancing companies to manage their work, user can bid projects, work on the same platform, check with the resources available, tracking of work, payment gateway integration, discussion and reports management. Our application helps in the following:

- Business-Expense Deductions
- Manage multiple projects
- Central work platform
- Communicative tools integration
- Secure encrypted data management
- Account based access
- Workspace
- Time tracking
- Project Discussions
- Legal bound for the users
- Work collaboration can be managed
- Lots of projects

III. SYSTEM DESIGN

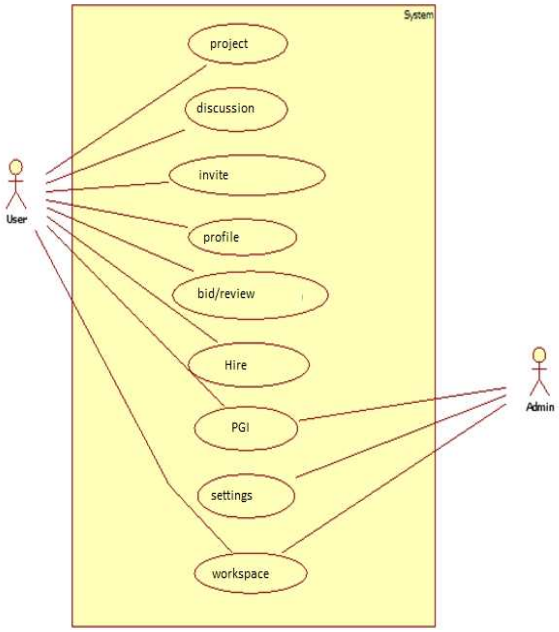
A. Data Flow Diagram

A DFD or Flow-chart is a graphical Symbol of the data flow over data or information. It provides demonstrating the information process structures. Here the DFD resolves the act as a most important step to creating an outline of the system. Similarly, it can castoff for the conceptualizing the data processing.



B. Use Case Diagram

Use case diagramcontains actorsand thefunctionsto be performedbythe actors.Each actor shouldrelate to at least one function.Andall the function that should relate to oneactor.



C. Class Diagram

The class diagram involvesallthefunctionsthatareinvolvedi

n themodule. And it also categorizesthe function accordingthemodule andtheproduct requirementthat has to be delivered.

VI. CONCLUSION

Our platform is help full for both companies and freelancers, companies can outsource the projects and freelancers can bit for the projects and even use the platform for the project collaboration. Easy tracking and management helps to manage the work in proper way and even helps to optimize the business. Freelancing provides the opportunity for everyone by working directly from their house. There is no need to any commuting expenses, commuting time, work clothing and work within cubicles, sharing an office and insane conversations during break times. One more great effective benefits are that an opportunity for becoming our own owner or boss. There is no any projects assigned that we do not want and there is no need for working with all the team colleagues who do not bother to give respect to us, worrying and thinking that who will be going to look on our shoulders. Freelancing will allow us for using any different combination of skills on different numbers of projects at a single time. Sometimes it can become wonderful for all individuals that prefer enjoying diverse work, topics and also tasks that are best when there are numerous choices to consider. With freelancers user have more flexibility. Companies hire freelancers when they need them and don't pay them a salary just for being at office.

VII. FUTURE ENCHANTMENT

In this advance competitive technology environment it is very difficult or tough to guess how the business would expand or improve in next coming years. For that purpose we have advanced plans in future enhancements on to the current or existing project to succeed in an advanced technology environments.

- Live collaboration like webinars and conference can be added
- Graphical tracking charts can be integrated
- Third party resources can be added
- Task management system can be added
